5: Blom & LaFarge A,E-4,5 (1925) 1927 NV9 Tzeltal NV9
Amatenango
Tenejapa

Amatenango lies in an open valley. It is estimated at three hundred houses, each in a fenced yard of good size, and shaded with fruit trees. The houses are large and well built, of mud and grass thatch, with porches. The small church and Town Hall are tiled-roof and stuccoed. The fields, which lie close around the town, and the gardens in the town itself are watered by a stream brought down a very pretty, roaring flume from higher land behind the village. The irrigation system is fairly elaborate, and is unique in this area as far as we know.

The pottery, which is their chief product, is almost all of one shape, a sphere, with three handles and a narrow bottle-neck with a flat lip. The decoration does not vary. Both shape and design, how-

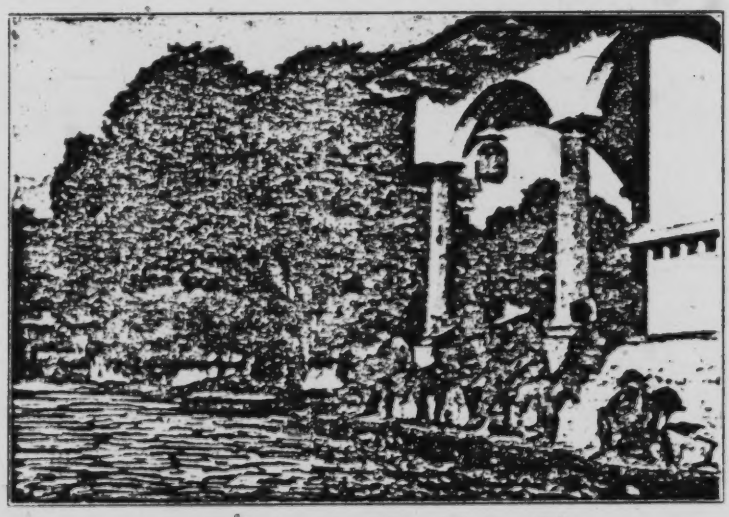

FIG. 332—Tenejapa, Chis. Indians at the Town Hall.

ever, are of considerable charm. The polish is fine and smooth, giving an even golden-red colour all over, with the decoration in a deep, reddish brown. No such fine, finished work is done by other tribes in the area. The pots are baked by placing them on a rectangle of boards, two or more meters square, around a hot fire. The woman in charge turns them until they are done (fig. 333). These pots are carried by the men as far as San Cristóbal, where they are redistributed, and to Nenton in Guatemala. Their industry is sufficient to enable them to maintain mules for carrying their goods, although both men and beasts are equally loaded.

The curing hierarchy was organized on the basis of the dual division until the 1940s. There were two leader curers, one on each side, who were in charge of guarding their own side against intrusion of evil spirits. During the 1940s a breakdown in the hierarchial principle led to some lessening of the power of the group and a collapse of the leadership. People now patronize curers from either section, but there is some feeling that it is safer for the curers if they cure only on their own side.

The dual division persists as a basis of economic organization only in the case of the cattle owner's associations. Pasturage on communal lands is allocated according to residence in the upper or lower division. Since cattle raising for beef has increased the size of herds the cattle owners on each side have formed an association to clear the waterholes and celebrate fiestas at the major waterhole on the Day of the Cross. None of the other new enterprises in town organize on the basis of the territorial division.

In the etiquette of social interaction, the dual division is still taken into account. When a resident of one side walks in the streets of the other side, he is not expected to greet passersby or people in their houses with the usual *b'onme wiš* or *b'onme tat* (I go, elder sister or father, or whatever the appropriate extension of kin terms may be). Such street greetings are mandatory on one's own side of the town. It is considered much safer to

18. When a serious illness caused by witchcraft has been cured, the patient must be protected against reentry of the evil by a gift of medicine to the house. Palm crosses are made for the corner posts and the entry, and a medicine consisting of a mixture of garlic and creosote, the seeds of mustard, and *poštan*, a "hot" herb, is mixed. As the crosses are nailed on the posts, the curer marks a cross with the medicine over the palm cross. This "covers the eyes of the evil spirit" so that it will not enter the house. In the Eyes of the Ancestors

The relationship between house spirit and the spirits of the residents is an uneasy one. Fear is associated with this capricious spirit, who might make an alliance with evil spirits, and whose power is evident only in sickness and in death, never in good deeds. A sense of alienation is conveyed in the fact that the house spirit and the spirits of the spring are conceived of as Ladinos. Spirits of the house and of the landscape are exacting landlords from whom the tenants expect nothing in return for their offerings but freedom from harm. Acceptance of the offerings seals a contract between spiritual occupants that must continually be renewed in order to maintain the balance of security expressed in the phrase "to be of one heart." The payment of a "tribute" in the form of food, liquor, and entertainment is part of a larger strategy by which these Indians ensure their survival by appeasement of overlords, demanding government officials, and the very rats which live in their houses and feed on the corn they store in the eaves.

The springs. Other meeting grounds for the spirits of people and places are the springs. The major spring, San Nicolás, is located on the southwestern periphery of the town. It provides drinking water and water for irrigating the cultivated lands. A second spring, called Pahaltón, lies closer to the village and provides a smaller stream of water directed into the canals irrigating the fields of the center. Some say the spirit of San Nicolás is a small Ladino boy; others say he is a man. The spirit of Pahaltón is a female non-Indian, or *Ladina*. The spirits of these waters are able to effect miraculous cures for patients who have lost their souls or those who are of two hearts because of upset social relations in the home. Male patients are brought to San Nicolás and female patients are brought to Pahaltón to seek a miracle. In the curing ceremony an arch of flowers entwined in pine boughs is constructed as closely as possible to the spring

7: Nash E-5 (1957-1967) 1970

NV9 Tzeltal NV9
Amatenango del Valle

waters. The curer brushes the patients with branches of the cooling bushes and herbs growing near the spring, the same ones used in the fiesta of inauguration and the curing ceremonies conducted in the house. The strategy of making the house spirit happy by providing music, dancing, and drinking is repeated at the spring to make the water spirit happy. Some of the family of the patient must remain in the house as "waiters" (*maliwanehetik*) to receive the spirit if it should arrive before its owner. The maliwanehetik must drink as much liquor as the participants at the spring.

The Cave of the Ancestors. The ancestors, the *me?tiktatik*, were believed to have lived in a cave in the hills lying on the peripheries of the township. In the myth that follows, they are given a historical identity as two brothers, the Shuntonetik. Shunton is one of the Tzeltal patronyms of families still living in the town, and in fact the narrator of this version of the myth is Mariano Shunton, whom people consider a descendant of the ancestors.[6]

Formerly a priest asked for a document to be delivered to Antigua in Guatemala. Two messengers were sent with it, but they did not return. Another messenger went and did not return. Four or five more messengers were sent out and did not come back. Finally they sent a man from the cabildo with his younger brother. They left early in the morning, and the elder brother said as he left the other town officials, "If I succeed, I want a fiesta. Look for my sign of four arches [rainbow]."

The two brothers first went to a hill. There they called upon their swayohelik [*animal spirits*]. *First the animal spirit of the elder brother spoke. He said, "I am a stone." Then the animal spirit of the younger brother said, "I am a stick. Moreover, I am a snake and a maguey plant." The elder brother said, "Then we are well off. Let us go."*

6. The same identification of a lineage patronym with the most important sacred hill is found in other Tzeltal- and Tzotzil-speaking communities (Holland 1963, Hermitte 1964). The pattern may have originated in a period of pre-Conquest expansion when the dominant lineage was assigned a custodial leadership over the new settlement, with their spirits remaining as guardians of the community. Members of the contemporary communities who bear the same patronym do not have any privileged position. These associations of past and contemporary belief are, as Vogt (1964:216) cautions, still hypothetical.

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

231 cattle was seized by bandits or soldiers. It is "new" only in the size of the
233 holdings, which have expanded from ownership of one or two head per household, primarily useful as draft animals, to a herd as large as two hundred head belonging to the wealthiest man in town. Cattle rearing is now a capital investment for resale as well as for draft animals in plow agriculture.

233 The increasing herds have stimulated competition for community re-
311 sources. The control of communal grazing and waterhole rights is exer-
312 cised through the traditional dual division of the town, with rights to pas-
621 ture allocated on the basis of residence in the upper or lower barrio of the
575 center. An association of cattle owners has developed in each of the sections, and the leaders of each association call together all members to clean the water holes and repair the troughs. A recent project of the cattle association of the upper section has been the erection of a large cross at the
[789] water hole. The water had dried up the year before, and the installation of the cross was an attempt to ensure a continuous supply of water in the fu-
[096] ture. The priest blessed the cross in the dedication, and the fiscal and prayer-reciters adorn it each year on May 3, the Day of the Cross in the old Catholic calendar, along with other crosses of the village.

233 Cattle grazing is the source of much of the conflict in the town. The cat-
621 tle roam freely in the woods and communal pasture lands, and many are
578 lost or stolen. The cattle association has not fenced in the pasture in order
575 to control it. Their tactics have been punitive; they have raised funds from
627 among members to hire men to kill suspected cattle thieves. In the last twenty years, six men have been killed as cattle thieves, and at least three of those were known to be killed by men hired by the association, which then paid the court fines to set the killers free. The leader of one of the cattle associations was killed after an incident in which he fined a man who had failed to assist in cleaning the water holes. The fine of 2 pesos per head of cattle represented a large fee for the man, who had sixty head. He refused to pay more than half, since he said he had not been notified.
[754] When his daughter later died of illness, he blamed her death on witchcraft exercised by the cattle association leader, and later killed him.

231 Cattle are only minimally exploited as a resource. The cattle are not
434 butchered locally since there is not a large enough market, but are sold to

868
857
[323] the larger ones their mothers make, but their products are usually not commercially saleable until they reach the age of marriage. Their responsi-
[312] bility in preadolescence is to bring water from the faucets installed in every other block of the town, and to degrain corn, tend the fire as the *nixtamal,* or corn dough mixed with lime, cooks, and help their mother grind it. The careful assessment of the child's capacity to perform tasks is exemplified by the gradations of water-carrying jars given to each child: the older the child, the larger the jar, with minute variations in scale. The
[592] close, usually wordless cooperation between women in a household comes
[462] from years of working together and knowing their part in cooperative tasks.

Boys accompany their fathers to the fields after they reach the age of six and when they are not attending school. They do not participate in the work of the milpa until they are eight or older, but they pick up twigs for the fire or gather the wild berries or plants which supplement the diet of
[411] the family. They usually carry slingshots with which they kill field rats
[262] and birds, which they bring home to cook and eat. Teaching a boy the
868 tasks involved in agriculture is consciously undertaken by older brothers
241 or the father when the child reaches the age of twelve or thirteen. The following reminiscence of this training is given by a man who had been brought up by his widowed mother and brother.

159 *I went to the field with my brother who is eighteen years older than I,*
868 *when I was thirteen years old. My brother brought me to clean the milpa,*
241 *saying, "Let us go and you will learn how to work. See what I do and you do the same. You will learn what I do and you can do the same."*

One day I finished six rows. My brother said when he saw my work, "Good, just give a little more soil at the foot of the corn because the little corn must have a little soil. Now you do it well." "Yes," I said. He saw it was good, and he told me, "You have learned your work. You are going to forget it when you enter school. When you come out of school, go do two or three rows of work. When you hear the bell strike, go back to school."

He told my mother that I had learned to work, and she said, "Good you know how to cultivate." I learned to do my work better by going along with my elder brother in his work so that I would not forget.

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

159 622 177 178 [454] [754] [756] partners. He sold a few shares of a truck he and his family owned to Indians, but he retained the controlling interest. His wife was reputed to be a witch, and was an active curer, combining old and new treatments of illnesses.

His position was challenged in the 1960s by the Ladino schoolmaster, 159 875 177 178 563 578 [312] [756] who had been remarkably unsuccessful from his arrival in 1953 until that time in gaining personal power and influence. His intercession in a local homicide case involving a father's murder of his son outraged the townspeople, some of whom threatened to kill him. His attempts to have water installed aroused the curers against him since they were accustomed to bathing their patients at the source of the spring from which they were debarred when the plumbing was installed. His demands that children [871] [582] within the legal age limit should not only attend school but should be prohibited from marrying until they had completed their schooling caused the anger of parents who wanted to give their daughters in an early and profitable marriage.

159 875 177 178 563 [55?] [608] [546] [278] [431] Gradually, however, the schoolmaster extended his own base of support. He minimized his attack on local customs, adhering only to those laws affecting the school population, over which he had a great deal of control. Some of his support came from the orthodox Catholic members of the community; he extended his control through compadre relationships with over eighty members of the community. He showed movies which he acquired from the United Nations and other educational film sources and gave away medicines acquired from the health officials in the state capitol who were his friends. From one of these sources of philanthropy he acquired wool shawls which he gave to every woman in the town.

The professor demanded no return from the townspeople other than their respect and admiration; he was a person who enjoyed commanding others and needed an arena in which to project his own personality. In his early years in the town, he had to satisfy this need by capturing stray tourists and plying them with soda pop or coffee. His first opportunity to gain [404] leadership in the local sphere came in 1963, when he supported the new truck-owning cooperative. He used the influence of contacts in the state capital, including compadres, friends, and relatives of his wife's family. He promoted the cooperative's attempt to gain the presidency. One of the first

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

159 civil officials, not of me"). He identifies himself with the Indians in the
875 fight against the competitive trucking cooperative ("Those who are with
563 him [Don Ramon] are traitors to the pueblo. They are being exploited by
177 him"). While he does not accuse Ramon's wife directly of witchcraft he
178 implies this in saying that people sign their candidate's nomination peti-
[754] tion for president because they are afraid Juana will use witchcraft. This is
[626] a characteristic mode of attacking one's enemies in the town. He claims credit for all of the innovations in the town which have won public approval—the highway, the water supply, electricity, and so forth.

622 The profit motive is inadequate to explain why Ladinos want to play
875 the role of cacique in these corporate Indian communities. One must seek
563 for an explanation instead in the social status they gain. While their jobs
177 are limited and usually frustrating and they can never be completely inte-
178 grated into the community, political activities offer them a larger arena in which they can derive personal satisfaction. The contrast between the schoolmaster's position in Tzo'ontahal before he became a political leader and his position after finding local supporters illustrates this. In the early days of his residence in town, when he built a chicken coop which extended a few feet beyond the grounds allotted to the schoolhouse, some Indians threatened to kill him. In 1957, I saw him trying to summon a policeman from the town hall, which was adjacent to the schoolhouse, to remove a boulder from the path so that a visiting friend could pass in his automobile. No one heeded his urgent shouts or the whistle he used to call children to school, although they were well aware of what he wanted. But by 1965 there was not a single important transaction which did not require consultation with the schoolteacher. Campesinos from as far as Villa Las Rosas came to request his advice and his help in approaching government agents. In projecting his political role, he gained support for projects which were of interest to him. When he had succeeded in getting the government to install water pipes and electricity, he talked the civil authorities into building a kiosk, or bandstand, in the plaza. This was a fulfillment of his ambition to make the town over in the image of a colonial Spanish pueblo. His final statement in the speech quoted above, "Today we see a kiosk, tomorrow we will have a telephone, telegraph, and a factory!" reveals the symbolic significance it had for him.

Amatenango del Valle

Women work steadily at making pottery. Older girls help with household tasks from the time they are six in order to permit their mothers to make pottery. They bring the water from the faucets installed at every other corner of the streets in the center, degrain corn, and when they are about ten years of age assist in grinding corn or bring the cooked corn to the mill. In three-generation families, the older woman tends to the tasks of preparing the meals while the younger women make pottery.

The men work uninterruptedly at agricultural tasks, taking only a noon break to eat a lunch of tortillas, coffee, and sometimes beans. During periods of intensive activity, women or children bring a hot lunch to the fields. At about three-thirty they return home, sometimes stopping to collect firewood along the way. When they arrive home, there are no greetings. They deposit their loads of harvested crops, firewood, or *zacate* (leaves and grasses to pack pottery). The children pick these up and bring them into the kitchen with no words spoken. The men sit on the bench of the porch, sometimes assisting their wives with degraining, and "rest their heart" until supper is served about six o'clock. The final task of the day is cooking the nixtamal for the following day's meals. The family retires about eight o'clock.

The weekly scheduling of household celebrations indicates the thorough absorption of the Catholic calendar into the social schedules of the town. The choice of Saturday and Sunday for most household celebrations is geared to a week in which Sunday is a day of rest.

Other significant days of the week are Thursday and Friday. Thursday is thought to be the day when "the earth is open." House curing fiestas are scheduled on this day since the earth of the house floor can receive its gift of liquor. This is also the appropriate day to visit the caves to ask for crops and cattle, or to make payment with candles. Friday has a sacred quality because of the crucifixion, but except during Holy Week and Lent the townspeople ignore any proscription on eating meat.

The Annual Cycle

The annual ceremonial cycle of religious rituals and life crisis events establish the pattern by which the people schedule their economic activities. Since the township gained dependence in 1931, there is no forced labor on

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

The behavior described for each institution in earlier chapters will be summarized as a mode of adjustment or adaptation in relation to the beliefs that give it meaning and purpose.

Economic Activities

Learning agricultural tasks and pottery-making in the household is part of adjusting to membership in the community. Parents are responsible for teaching the value of industriousness and are held accountable throughout the life of the child. Agricultural tasks are scheduled in a yearly cycle that provides sufficient flexibility for a man to carry out community and familial ceremonial responsibilities. In milpa agriculture, there is no specialization of tasks. Small-plot agricultural production with a simple technology has been reinforced by the land reform program. Since the lands incorporated under the Ejido Commission in the 1930s were attached to the community, agriculturalists were not forced to adjust to new ecological conditions. Politicalization was minimal since the local commission operated within the old civil hierarchy. In the recent expansion of ejido colonies in hot country, Indians from the community have developed alliances with non-Indians in asserting claims to the land. Without any preexisting civil hierarchy, these ejidatarios have not had to adjust their activities to a given structure of authority, but have developed independent political organizations as an adaptation to their new environment.

Women's work in pottery is less subject to changes in techniques and organization than is men's. The schema of production in simple tasks in a fixed sequence makes it easier to teach girls each process and reinforces a given pottery tradition. My guess would be that if wheel production were introduced, it would liberate the creativity of each potter by freeing her of established routines.

Pottery production is not surrounded, as is agricultural production, by ceremonials. There is no god to whom one lights candles or gives offerings to ensure success, although there are hazards in production, particularly at the time of firing. Agricultural productivity, on the other hand, is thought to depend on the proper relation between the spirits of the heaven and of the church with the spirits of crops.

In the new economic activities, the Indians have shown both adjustive

7: Nash E-5 (1957-1967) 1970 NV9 Tzeltal NV9
Amatenango del Valle

and adaptive responses. With the expansion of cattle raising, Indians have organized associations adjusted to the traditional dual division. The association for each side of the dual division mobilizes labor for maintaining the watering holes. The failure to organize communal corrals means that inefficient herding techniques, damage to the milpa, and frequent loss or theft of cattle persist. The association reacts to the last problem by hiring killers to get rid of those suspected of theft, but this adaptive response is limited to dealing with particular incidents and has not solved the problem.

The manufacturers of contraband liquor have succeeded in organizing a syndicate strong enough to maintain a monopoly price for both the internal and external markets and to provide security for themselves against federal agents. The syndicate mobilizes for specific actions, such as raising the bail bond for imprisoned members or punishing informers. As a community-wide organization ignoring the dual division and age-ranked seniority, it represents an adaptation in response to extra-community pressures.

The cooperatives that have been organized to manage the local store and the trucks provide permanent managerial operations that are an adaptation to growing interaction in extra-community economic activities. Cooperative owners are able to raise the capital to maintain and expand these operations. It is within these structures that entrepreneurial skills are being developed. The organizers gain the advantage not only of socializing the risk of loss but also of making a profit in a community where belief in witchcraft, fostered by envy, is rampant.

Activities in the new economic enterprises are not supported by any supernatural belief. In order to gain acceptance for the new enterprises, the entrepreneur Santos, who had organized the trucking cooperative, recognized the need for an ideology. His rhetoric drew upon the sense of deprivation Indians feel in their relations with Ladinos. He justified his own ends as an attempt to gain for all the community the profits that only Ladinos had been able to gain through trucking and crops resales in the regional markets. The ideology he had begun to formulate stressed economic and political independence from both the Ladino entrepreneurs of neighboring towns and government agents who tried to promote welfare

M 563 627 647 T 621 743 647

doctors and officers of the National Indian Institute (INI) who arrive to the villages at irregular intervals. In Amatenango, the INI has established a "clinic" in which a native nurse provides some medical services, such as vaccinations, the selling of aspirin, etc., while in Aguacatenango the native INI nurse provides services in his home.

T 621 647 474

In both the villages the INI has established a cooperative store which sells staples which are not produced in the community, but such stores are in no sense agents of cultural change, selling only commodities which the Indians habitually buy elsewhere. (A reason for the lack of success of such stores is that the Indians have not understood the "cooperative" principle, very few men have joined, and they are disillusioned with the marginal profit obtained through them.) In 1958, Amatenango had water piped into the village, a project completed by the INI in 1957; while after the author left Aguacatenango in 1958, water pipes were installed there.

T 621 647 312 114

M 563 692

Political relations with the Ladinos of a more formal nature occur through the courts of justice and national government offices, and they are characterized by the covert (and at times open) hostility and misunderstanding on the part of both Indians and Ladinos (see D. Metzger, 1956 and Fuente, Julio de la, 1958).

T 628 438 571 608 582

Relations with other Indian villages are common both for Amatenango and Aguacatenango. They trade with the communities located in different ecological zones the products that do not grow in their territory (ocote from the highlands, sugar cane from the lowlands, etc.) in exchange for their own products and they

628 438 571 608 582 628 166 602 establish with them the relations of posada and compadrazgo, mentioned above, as well as (in the infrequent cases of inter-community marriage), some affinal kinship ties. In the few recorded cases of emigration from the village, some members of the community keep communication with a few consanguineal relatives living in other Indian villages, although social exchanges and the memory of such relatives tend to die out after a generation or two.

105 With the other Indian communities in the area, Amatenango and Aguacatenango share a common material culture and belief system, derived from a Highland Maya cultural tradition, the same linguistic background, and a subsistence pattern based on agriculture. They are peasant, in the sense that they are rural villages which depend, for survival, not only on agricultural work, but on economic exchange with other semi-urban and urban centers (Redfield, 1956:25-28).

438 [473] Aguacatenango buys pottery and chayotes from Amatenango, whose women come periodically to sell them, and trago (drinking alcohol) which some Amatenangueros produce illegally. Amatenango buys from Aguacatenango surplus corn.

628 [311] 3127 628 916 The two towns have amicable relations, thinking of each other as neighbors, and sharing the same pasture lands, and source of water for irrigation. The two communities share the same cultural hero, called Juan Lopez in Aguacatenango and Lopez Shuntón in Amatenango, connected with the corn and with the "lightening who lives in a cave." For Aguacatenangueros this personage is the builder of the roads, responsible for the eradication of "cannibalism," the conversion of man-hunting animals

8: Hunt E-4,5 (1958)1962 NV9 Tzeltal NV9
Amatenango .
Aguacatenango

361 The central plaza contains the Church, the local government offices, [366] the school and the National Indian Institute (INI) cooperative [368] store (see below), in Amatenango this list being increased by the INI clinic. Around these plazas (open squares) the houses are relatively concentrated, the population density is high and the size of the sitio (a household plot) small. (There are about seven or eight sitios in a block one hectare in size.) Toward the margins of the town the houses thin out, being surrounded by milpas. Well established family groups live toward the center, while newcomers, poorer families and deviants live toward the [506] periphery. Sitios within the center are highly valued in both communities, the outskirts of the town being closer to the unknown dangers of the monte (hill and forest) with its malevolent spirits (animal souls of witches in the search of victims, owners of the caves, etc.).

361 Surrounding the villages one finds the communal grass 311 lands for pasture and the irrigated milpas. The grass lands and 312 the water source for the milpas de regadío (irrigated corn fields) 413 are shared by both villages, although Amatenango makes use of the water first, since the stream flows through Amatenango before it reaches the Aguacatenango lands.

311 Towards the hill slopes the milpas de temporal (corn fields depending on seasonal rain) are planted in scattered small groups, fenced together against the invasion of cattle;[1] and alternating with forested patches.

---

[1] See footnote 1, p. 17.

621 578 582 them to "overlook" the trespasser, but not many young men are willing to risk the ire of the other barrio bachelors, nor the gossip and sanctions applied to them by their own barrio mates.[1]

Each barrio plays a role in the political and religious organization of the village by sending an approximately equal number of officers to the Ayuntamiento and the Mayordomías. Although in some years there are more delegates from one barrio, they attempt to correct the imbalance in the succeeding years. [623] The Principales (council of elders) have also equal representation.

621 [573] [575] [312] Escuadrilla groups (adolescent boys' gangs) and unmarried women's Church groups are formed among barrio mates. Women, with few exceptions, used the water wells or pipe lines in their barrio of residence (the exceptions include women who originally came from the other barrio) and who do their washing at places in [476] the river on their barrio side. Men who work together at such tasks as buying and butchering a cow, building a path or clearing an irrigation ditch belong to the same barrio. House parties [521] [183] organized to buy candles for the Church before a special Saint's day are barrio affairs, and no resident of the other barrio (with [575] the exception of the anthropologist) is invited. In the past, there were, in Aguacatenango, religious sororities sponsored by the Catholic Church, and each barrio had a separate one. There

---

[511] [521] [1]A man that has married once is considered to have had his share of the available women of the barrio. Second marriages, especially with girls who have never married before, are not well thought of. It is common, then, that second marriages occur across barrio lines. A man finds it easier to cope with the antagonism of the other barrio men (who are expected, in any case, to be antagonistic) than with the bachelors and neighbors in his own barrio, where he has to face the antagonism in every day interaction.

G21
423
[312]

each barrio prolonging their cornfields towards "their side." Aguacatenango irrigated land is divided and allocated so that men from one barrio have their plots separate from men from the other barrio, the barrio plots being watered by separate canals.

The same way that the community as a whole holds exclusive titles of ownership and rights of usufruct against other communities, the barrio has a monopoly of certain town lands, over which it holds, if not ownership titles, rights to plant their crops, gather palms for the roofs of the houses and espino for the fences.

In 1956, a group of men from one barrio bought land from a nearby finca (ranch). A month later, the other barrio bought land from another finca owner. The meetings which planned the purchases were closed and maintained in semi-secrecy. There was some conflict over the rights of the "other barrio" to use the pastures included in the new lands of the other, and gossip on the subject lasted almost two years, revealing, once more, the traditional separation between the two village factions.

That the barrio as a land-holding unit is more significant in Aguacatenango should not be a surprise: Aguacatenango is much more dependent on land for its subsistence, since agriculture is the only large-scale productive enterprise of the community. Therefore, conflict and competition for land tends to acquire greater proportions than in Amatenango where people have other important sources of income. One of the ways in which possible conflicts between village factions over land and its products is handled, is by delimiting the territorial rights held by the people who belong to such factions.
